

Press Release

Flowmaster to Showcase New Aerospace System Simulation Software at Paris Air Show

April 2007, Northamptonshire UK

Paris Air Show 2007 sees the launch of Flowmaster V7 Aerospace R1 - new dedicated aerospace thermo/fluid system simulation software that significantly benefits the way organisations implement the design and simulation of systems throughout their development process.

This new release of Flowmaster brings major improvements in the modelling of fuel, hydraulic and environmental control systems. V7 Aerospace R1 incorporates a catalogue of industry-tailored components and enables users to build and customise their own component catalogues - reducing project time and improving the quality and repeatability of initial designs.

Flowmaster V7 enables organisations to integrate system simulation software within their existing CAE tools, providing an integrated simulation approach and a robust core for fluid system design processes.

Powerful security and accessibility controls ensure that the right engineers have the appropriate levels of accessibility, ensuring simulation data and component models can be safely shared across your organisation and supply chain.

According to Jason Burke, Flowmaster Aerospace Product Manager, "This new version of Flowmaster will give aerospace users unprecedented capabilities in modelling, as well as leveraging the vast amounts of information generated by it."

This new software will be on display at exhibit #13 in the Le Conseil Général des Hauts de Seine area of the Paris Air Show – the Flowmaster team will be demonstrating its new capabilities and discussing the benefits to the development process and information management.

About Flowmaster Group

Flowmaster Group is a leading global provider of fluid system simulation software and services, with 15 successful years serving customers from a wide range of industries. Headquartered in Northamptonshire UK, Flowmaster offers wide range of fluid and thermal flow products, technical training and regional support to ensure the fastest return on investment possible for our customers.
