

The purpose of this session is for attendees to gain an overview of the Flowmaster application in the Oil and Gas environment. By running through a brief overview of its uses, working through some tutorials you will be creating and analysing systems which are both steady state and transient in nature - Flowmaster engineers will be on hand to assist and resolve any questions which may arise

Agenda

08.50am Registration and Coffee

09.15am Tutorials

- Overview of Steady State
How to build a network, run analysis and review results
- Overview of Transient Analysis
As above plus how to input specific performance data

10.45am Refreshments

11.00am User Selected Tutorials

User to choose from range of tutorials which include - but not limited to - analysis of cooling systems, rising main, and flow balancing studies

11.50pm Close / Lunch

You're welcome to come join us for lunch and continue any discussions.
